Practical Activity: Train Your Own Artificial Intelligence

Use **Google Teachable Machine** https://teachablemachine.withgoogle.com to create a model capable of recognizing objects through a camera.

1. Select three different objects.
2. Train the model using images of each object.
3. Check whether the model recognizes them correctly.
4. Test the model with different backgrounds and lighting conditions.
5. Explain why recognition errors occur.

Save evidence of each step of the process.
